- Highly driven, positive attitude, team player, self-learning, self-motivating and flexibility
- Strong customer focus - Decent Networking and relationship management
- Flair for creativity and innovation
- Strategic thinking This is an individual contributor role and will need client interaction on technical side.

Experience - 4 to 7 years

About Senior DevOps Engineer in VoerEir:

As part of the DevOps team, your work will be to direct and setup robust CI/CD pipelines through technical prowess, collaboration, versatility, and creativity.

The position offers candidates expansive opportunities for professional growth across a variety of business and technology domains. You will play a key role as an individual leader in the field and contribute internally to an organizational culture that deeply values transparency, performance, development, creativity, collaboration, and trust.

About The Organisation:

VoerEir is a start-up founded in 2015, with the focus on helping telecom operators succeed with their NFV transformation. Within our first two years we have managed to get a list of coveted customers which we are

extremely proud of. The list of costumers consists of several international tier one operators and some major suppliers. Our team, young and hungry, has many years of experience from OpenStack, NFV, Telecom application development and VNF onboarding. We continue to upgrade our knowledge base through industry cooperation, open source community engagement, cooperation with university and most important assignments to evaluate and help to improve many different NFV infrastructures.
